LeapPoint ◇ Governator ✕

# IDENTIFY RISKS BEFORE YOU MAKE CHANGES

The LeapPoint Governator is a **data governance tool purpose-built for Adobe Workfront**. In seconds, users can quickly identify all areas where a custom field is used across all Workfront instances.

Are you being asked to make changes to custom fields in Adobe Workfront, but you can't easily find all instances of the custom field, nor evaluate the impact the change might have on current projects or historical data?

LeapPoint Governator can help you visualize all the associated objects for a custom field – including projects, tasks, reports, documents, and more – in one place with a few clicks of a button. As a result, administrators can make more informed recommendations and eliminate the risks of making widespread changes.

Weed Out Bad Data

Quickly and confidently find, organize, and secure relevant data with Governator's in-depth search feature

See Impacts in Real-Time

Don't second guess your findings with comprehensive and easy-to-read reporting.

- ✓ Display the object query results in an easy-to-read table
- ✓ Display the object hyperlink (for easy navigation to the object) within the query results table
- ✓ Display the object's custom field value within the query results table
- ✓ Provide an Impact Analysis summary for the custom field

With Governator, Workfont Administrators can:

- Perform complex and custom data audits

- **Assess a custom field's impact throughout Workfront**

- **Quickly find objects that have a specific custom field value**

- **Evaluate the risk of removing custom data from Workfront**

What Are You Waiting For?

Experience first-hand how Governator can help your organization get even more out of Adobe Workfront. Request a demo: sales@leappoint.com.
